LEAD-BASED PAINT RENOVATION REQUIREMENTS

OUTLINE:

| INTRODUCTION |
| LEAD-BASED PAINT HAZARD MANAGEMENT IN NORTH CAROLINA |
| WHY IS THIS IMPORTANT? |
| APPLICABILITY AND EXEMPTIONS |
| COMMON QUESTIONS RE: THE LHMP-RRP |
| RENOVATE RIGHT BROCHURE |

Learning Objective: This Section is included as part of risk management to make brokers-in-charge aware of requirements imposed in 2010 concerning renovation, repair and painting of structures built prior to 1978.

INTRODUCTION

Presumably all licensees know that owners of residential properties built prior to 1978 must provide prospective buyers or tenants with a Lead-Based Paint Disclosure in all sales or lease transactions and generally must also provide the EPA’s pamphlet, “Protect Your Family from Lead in Your Home.” These disclosures resulted from the Residential Lead-Based Paint Hazard Reduction Act passed by Congress in 1992. Both the Department of Housing and Urban Development (HUD) and the Environmental Protection Agency (EPA) were granted rule-making authority and each agency issued identical rules in 1996. [The HUD rules may be found at 24CFR Part 35, and the EPA’s rules are at 40 CFR Part 745.]

The EPA issued additional regulations effective April 22, 2010 specifically related to renovation, repair and painting (RRP) activities that might create lead-based paint hazards in single and multi-family homes. These regulations may impact licensees both in their personal capacity if they own any pre-1978 residential properties, as well as in their broker capacity, whether managing residential property built prior to 1978 or assisting in the sale of such a property. This Section will provide an overview of the requirements and resources brokers may consult for more information. Much of the following information has been drawn from the Health Hazards Control Unit’s website of the North Carolina Department of Health and Human Service. Licensees are encouraged to explore the wealth of information that may be found at www.epi.state.nc.us/epi and click on “Lead.”
LEAD-BASED PAINT HAZARD MANAGEMENT IN NORTH CAROLINA

Lead-based paint hazards arise from three sources: lead-based paint in poor condition, lead-contaminated dust, and lead-contaminated soil. The improper disturbance or removal of lead-based paint may result in the production of paint chips and dust that may contaminate a structure inside and out. Young children, under the age of six, are most vulnerable to the dangers potentially caused by exposure to lead-based paint and associated lead in dust.

The North Carolina Department of Health and Human Services, Division of Public Health, Health Hazards Control Unit (HHCU) administers two lead-based paint programs in the state of North Carolina in lieu of the EPA. These programs are:

1) the Lead-Based Paint Hazard Management Program for abatement activities (LHMP) and
2) the Lead-Based Paint Hazard Management Program for Renovation, Repair and Painting (LHMP-RRP).

Through these programs, the HHCU provides information to the public and to business and industry about the health hazards of lead-based paint and ways to control or prevent lead poisoning. The HHCU certifies firms and individuals conducting lead-based paint abatement activities and/or renovation activities, accredits training providers and courses, and issues permits for lead-based paint abatement projects that occur in child-occupied facilities and housing built before 1978. The HHCU also inspects lead-based paint abatement projects.

The Lead-Based Paint Hazard Management Program (LHMP) was established in 1998 to address hazards associated with the improper removal of lead-based paint or lead-based paint hazards. This program requires a person who performs an inspection, risk assessment, abatement or abatement design work in a child-occupied facility, such as daycare centers and preschools, or for target housing, e.g., built before 1978, to be certified and establishes the necessary training for certification. The program also requires the certified individual to obtain a permit for any proposed abatement work. North Carolina has adopted the EPA’s requirements regarding work practice standards for lead-based paint abatement activities.

Renovation, Repair and Painting (RRP) Requirements

Common renovation activities can create hazardous lead dust and chips by disturbing lead-based paint, which can be harmful to adults and children. What is a renovation?

DEFINITION: Renovation is broadly defined as any activity performed for compensation that disturbs painted surfaces and includes most repair, remodeling and maintenance activities, including window replacements and demolition of painted surfaces.

Beginning January 1, 2010, dust sampling technicians, firms, and individuals performing renovation, repair and painting projects for compensation that disturb lead-based paint in homes and child-occupied facilities built before 1978, must be certified and must follow specific work practices to prevent lead contamination. Child-occupied facilities include, but are not limited
to, child care facilities and schools with children under 6 years of age that were built before 1978 and where children stay at least 3 hours per day two days per week or more.

The RRP program further mandates that contractors, property managers and others working for compensation, in homes and child-occupied facilities built before 1978, must be trained and use lead-safe work practices. They must provide the EPA lead pamphlet "Renovate Right: Important Lead Hazard Information for Families, Child Care Providers and Schools" to owners and occupants before starting renovation work. The pamphlet discusses lead-safe work practices and actions to take before beginning work. A copy in English is reprinted at the end of this Section. The pamphlet also is available in Spanish and may be found on the website previously given or at the EPA’s website. The same pamphlet must also be provided to homeowners, tenants, and administrators of pre-1978 child care facilities and schools that will be renovated. Renovation information must also be available to the parents or guardians of children under age six that attend child care facilities and schools.

Certification of Firms and Individuals

A firm/company engaged in abatement activities must be a certified lead abatement firm. A firm engaged in regulated renovation activities (such as renovation, repair, or painting that disturbs greater than 6 square feet of interior painted surfaces or 20 square feet of exterior painted surfaces or dust sampling after renovation) must be a certified renovation firm. If a firm conducts abatement and renovation activities, then both certifications are required.

Individuals conducting lead-based paint abatement activities in North Carolina, such as inspections, risk assessments, abating lead-based paint hazards, clearance testing, designing abatement projects, etc. in housing and child-occupied facilities built before 1978, must be certified by the State of North Carolina. Individuals must also be certified by the State of North Carolina to perform renovation, repair and painting activities for compensation in housing and child-occupied facilities built before 1978. If an individual conducts both abatement and renovation activities, then both certifications are required. How much education or training is required to be certified? Not much; to become a certified renovator, an individual must successfully complete an eight hour course from a North Carolina approved training provider.

The website at www.epi.state.nc.us/epi/lead/accredited.cfm, lists certified Lead Professionals and has more information on certification training and requirements. Brokers are encouraged to review a list of commonly asked questions pertaining to the LHMP-RRP program taken from the Health Hazards Control Unit website and reprinted at the end of this Section.

Why Is This Important?

The eight hour certification course mentioned above includes the following facts and information:

● The number of children with lead poisoning has been reduced from 3 million to only 250,000 in the past several years since the mandatory disclosures were implemented in the mid-1990s and the EPA credits the real estate brokerage industry for helping educate the public to the risks of lead-based paint.
● The incidence of lead in the paint of pre-1978 homes depending on when built on average is:
1960-1978: 1 in 4 = 25%; 1940-1959: 7 in 10 = 66%; and prior to 1940: almost 9 in 10 = 86%. Average of all homes with lead in the paint = 35%.

● Not just inexpensive paint had lead, but expensive brands as well, as lead helped give the paint its vibrancy, durability, mildew and rust resistance, and sound proofing qualities.

● How much lead is “contamination?” 1 milligram per square centimeter is considered contamination. This amount is roughly equivalent to 1/1000th of the contents of a pack of sugar or artificial sweetener.

Children are most at risk because while growing their metabolism functions at higher levels than adults. Apparently, their bodies confuse lead with calcium and it affects not only their brains and central nervous system, but their bones as well, where it may be detected by x-rays. The medical process to remove lead is called chelation and is similar to kidney dialysis.

Note that activities as seemingly innocuous as pressure-washing a pre-1978 structure may cause a sufficient disturbance or abrasion that triggers testing by an RRP certified individual of all materials to be cleaned, including siding, door and window trim, fascia, soffits, frieze boards, etc, and the results of the testing must be kept on-site during the project. Note that simple power-washing merely to remove dirt and grime may not trigger the testing requirements, but intense laser pressure washing intended to peel paint or even simple pressure-washing where the paint already is flaked and most likely will be removed by the washing, most likely would trigger the testing requirements. When in doubt, the best course is to err on the side of compliance.

**Applicability and Exemptions**

Understand that the certification requirements apply to anyone who undertakes to perform renovations, repairs, or painting to a pre-1978 building for compensation. This includes property owners who have rental property who decide, for example, to replace the windows in a dwelling built in 1972 and either do so themselves or they hire someone who is not certified. Apparently, the fact that the owner intends to derive compensation from the rental of the property brings the owner within the certification requirements. Either the owner must be a certified renovator or renovation firm or the owner must hire someone who is appropriately certified.

Brokers providing property management services may be willing to handle routine maintenance and repair issues, but may wish to avoid situations where they are overseeing major renovation projects, such as those resulting from acts of nature, whether hurricanes such as Irene, or floods, or tornado or whatever. If the broker agrees to oversee renovation projects in excess of $30,000, then the broker must have a general contractor license, unless the broker or owner hires a general contractor to oversee all necessary renovations, which would include responsibility for utilizing appropriately certified individuals.

One of the major issues is containing any possible contamination, particularly dust. When lead is discovered inside a structure, a qualified contractor must seal off the room, turn off the HVAC, and vacuum with a HEPA filter vacuum cleaner “ceiling to floor and out the door.”
Outside projects are considerably more difficult, in that wind, weather and vegetation become factors that can seriously complicate and compromise containment efforts.

Exemptions
The LHMP-RRP regulations may be waived under certain conditions, including:
● the dwelling was constructed after 1978;
● the house or components have been determined by a certified inspector or risk assessor to be lead-free;
● the owner is conducting RRP work themselves on their principal residence;
● the interior space to be disturbed is less than 6 square feet (20 square feet for exterior work) excluding window replacements or demolition which are not exempt from the RRP requirements.

Failure to abide by the Residential Lead-Based Paint Hazard Reduction Act or the new RRP regulations may result in both civil and criminal penalties. The Act also allows a court to award treble damages against violators. Fines under North Carolina law may be $750 per day, whereas under the EPA sanctions, fines may be up to $32,500 per day.
COMMON QUESTIONS RE: THE LHMP-RRP

BEGINNINS NEXT PAGE
COMMON QUESTIONS
Lead-Based Paint Hazard Management Program for Renovation, Repair and Painting
(LHMP-RRP)
Health Hazards Control Unit
North Carolina Department of Health and Human Services

GENERAL

1. Q. Where can I find information on the dangers of lead-based paint and how it may impact on human health?
   A. By contacting the Health Hazards Control Unit at 919-707-5950 or by visiting our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html

2. Q. Where can I find information about lead-based paint and the renovation, repair and painting requirements for North Carolina?
   A. By contacting the Health Hazards Control Unit at 919-707-5950 or by visiting our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html

3. Q. What are renovation activities and what is a renovation?
   A. Renovation activities are the activities relative to lead-based paint renovations including the use of recognized lead test kits, information distribution, work practices such as cleaning verification and dust clearance sampling, as well as the activities performed by a certified firm, certified renovator, or certified dust sampling technician.
   A renovation is broadly defined as any activity performed for compensation that disturbs painted surfaces and includes most repair, remodeling, and maintenance activities, including window replacement and demolition of painted surface areas.
   For more detailed information regarding these terms and their applicability contact the Health Hazards Control Unit at 919-707-5950 or visit our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html

4. Q. What type of buildings do the renovation requirements apply to?
   A. Any child-occupied facilities (i.e., pre-school, day-care, etc.) and housing constructed prior to 1978 with some exceptions. For more information regarding exceptions contact the Health Hazards Control Unit at 919-707-5950 or visit our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html

5. Q. I own a home in North Carolina that was built before 1978. I want my home renovated, repaired or painted by a contractor. Does the business entity/contractor have to be certified to conduct this renovation?
   A. Yes. Firms that offer, perform, or claim to perform renovation activities for compensation in North Carolina in homes or child-occupied facilities built before 1978 must be a North Carolina certified renovation firm. (Certified renovation firm means a company, partnership, corporation, sole proprietorship, association, or other business entity or individual doing business in the State, or a federal, State, tribal, or local government agency or a nonprofit organization that has been certified by the North Carolina Health Hazards Control Unit to perform renovation activities.) Source: NC General Statute §130A-453.22
6. Q. I own and occupy a home in North Carolina that was built before 1978. I want to do my own (do-it-yourself) renovation. Do I as the owner-occupant have to be a North Carolina certified renovation firm or certified renovator to do my own renovation?

A. No. Owner occupied do-it-yourself renovations are not required to be done by certified firms or certified renovators. However, if you decide to hire someone to perform an applicable renovation, they must be a North Carolina certified lead renovation firm with a North Carolina certified renovator and trained workers. If you should perform a do-it-yourself renovation project, we recommend that you do so following lead-safe work practices and properly dispose of the renovation waste. Contact the Health Hazards Control Unit at 919-707-5950 for additional information or guidance.

7. Q. There is a renovation being conducted at my child’s daycare center which was built before 1978. Who should be doing the work?

A. A North Carolina certified renovation firm with a North Carolina certified renovator and trained workers assigned to the project.

8. Q. Does this regulation apply to schools?

A. The regulation applies if the school building was built before 1978, it is occupied by children under the age of 6, and if applicable renovation activities are being conducted.

9. Q. What information should I receive prior to the start of a renovation project if I live in a house or apartment built before 1978?

A. Firms performing renovations in North Carolina must provide the owner or adult occupant (if the owner does not occupy the dwelling unit) a copy of the EPA pamphlet The Lead-Safe Certified Guide to Renovate Right prior to conducting the renovation. Copies of the pamphlet are available on our website under the renovation, repair and painting section at: http://www.epi.state.nc.us/epi/lead/lhmp.html

In addition, if lead paint testing of the components affected by the renovation is done by a certified renovator using an EPA recognized test kit, the results of the testing are required to be provided in writing to the person contracting for the renovation activity before work begins.

CERTIFICATION AND TRAINING

10. Q. How do I find a North Carolina certified lead renovation firm, certified renovator, or dust sampling technician?

A. They can be found on our website at:
   http://www.epi.state.nc.us/epi/lead/lhmp.html
   From the quick links at the top of the webpage, select Search for NC Certified Professionals or contact the Health Hazards Control Unit (HHCU) at 919-707-5950.
11. Q. How do I tell if a renovation contractor or dust sampling technician works for a North Carolina certified renovation firm and has the proper individual North Carolina certifications for the job?

A. Ask to see these documents:

1. North Carolina **certified renovators have been issued a certification letter** by the Health Hazards Control Unit. They should also have a training certificate from their renovator course with their photograph on it.

2. North Carolina **dust sampling technicians are issued a photo identification card** by the Health Hazards Control Unit indicating their dates of certification. They should also have a training certificate from their dust sampling technician course with their photograph on it.

3. All North Carolina **certified renovation firms have been issued a renovation firm letter and certificate** by the Health Hazards Control Unit (HHCU).

12. Q. What is the North Carolina certification requirement for a dust sampling technician (DST) who performs dust clearance sampling after a renovation project?

A. The DST must be certified by the North Carolina Lead Hazard Management Program for Renovation, Repair and Painting (LHMP-RRP) and must be employed by a North Carolina certified renovation firm. (11/2010)

13. Q. Does a North Carolina **certified firm**, certified under the Lead-Based Paint Hazard Management Program (LHMP) for lead-based paint activities such as abatement, inspections, or risk assessments using North Carolina certified inspectors or risk assessors, also have to be a North Carolina **certified renovation firm** under the Lead-Based Paint Hazard Management Program for Renovation, Repair and Painting (LHMP-RRP) in order to make a written determination of the presence of LBP for a renovation project?

A. No.

14. Q. Does a North Carolina **certified firm**, certified under the Lead Hazard Management Program (LHMP) for lead-based paint activities such as abatement, inspections, or risk assessments using North Carolina certified inspectors or risk assessors, also have to be a North Carolina **certified renovation firm** under the Lead-Based Paint Hazard Management Program for Renovation, Repair and Painting (LHMP-RRP) in order to perform dust clearance sampling after a renovation project?

A. No.

15. Q. Can an individual who has taken an accredited lead-based paint inspector or risk assessor initial training course or HUD recognized lead safe work practice (LSWP) training course, take a dust sampling technician (DST) refresher course (4 hour) and receive North Carolina DST certification?

A. No. Individuals wishing to be a North Carolina certified DST must have taken an accredited (8 hour) initial DST course. Contact the Health Hazards Control Unit for a listing of training providers offering DST courses or visit our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html
16. Q. Can an individual who has taken an accredited LBP abatement supervisor or abatement worker training course or a HUD recognized LSWP training courses, take a certified renovator refresher course (4 hour) and receive North Carolina certification as a renovator?

A. No. Individuals wishing to receive initial North Carolina renovator certification must have successfully completed an accredited (8 hour) initial renovator training course. Contact the Health Hazards Control Unit for a listing of training providers offering the renovator courses or visit our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html

17. Q. Is an individual considered certified as a renovator or dust sampling technician (DST) in North Carolina after simply attending an accredited, discipline-specific training course (i.e., renovator course)?

A. No. Individuals must successfully complete an accredited discipline specific training course that meets North Carolina certification purposes as required by the LHMP-RRP rules, and they must submit a completed North Carolina application for DST or renovator certification. Applications for DST or renovator certification must include a copy of the applicable training course certificate issued by the training provider and a color photograph (passport style) of the applicant. Applications can be found on our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html or by contacting the Health Hazards Control Unit (HHCU) at 919-707-5950. In order to become certified, all applicants for North Carolina certification as a DST and/or renovator must be employed by a North Carolina certified lead renovation firm.

B. 18. Q. How do I become a North Carolina certified renovation firm?

A. Submit a completed North Carolina application for renovation firm certification to the HHCU. Applications can be found on our website at: http://www.epi.state.nc.us/epi/lead/lhmp.html or by contacting the Health Hazards Control Unit (HHCU) at 919-707-5950

19. Q. Where can I find the necessary applications to apply for NC certification as a certified lead renovation firm, certified renovator and certified dust sampling technician?

A. Contact the HHCU at 919-707-5950 or visit our website at http://www.epi.state.nc.us/epi/lead/lhmp.html

20. Q. Must the renovation firm certification application be submitted and approved before I initially apply for renovator or dust sampling technician certification?

A. No. You may submit both applications (i.e., renovation firm and renovator) together even though you will not yet have a renovation firm certification number to put on your renovator certification application. After a firm becomes certified, firms submitting for renovation firm certification on an annual basis must include their previously assigned renovation firm number (i.e., RRP0125) on the application.
21. Q. re faxed copies of completed applications for certification for a lead renovator, DST or lead renovation firm acceptable?

A. No. The HHCU must have the original application. A fax or copy is not acceptable. Follow each application’s instructions closely to avoid problems or delays in the certification process.

22. Q. Will North Carolina accept EPA-accredited courses or accredited courses from other state-authorized programs for certification purposes if the course was taught out-of-state?

A. Yes. If the class is taught out-of-state or if it was taught in North Carolina prior to August 1, 2010. All courses taught in North Carolina after July, 31, 2010 must be North Carolina-accredited in order to be acceptable for certification purposes

23. Q. Will the EPA recognize North Carolina accredited training for dust sampling technician (DST) and renovator certification in EPA-run states?

A. Yes.

24. Q. Is an EPA-accredited training provider required to have North Carolina accreditation in order to teach renovator and or dust sampling technician courses in North Carolina for certification purposes?

A. Yes. All training providers and their courses taught in North Carolina after July 31, 2010, are required to have North Carolina accreditation and all instructors must be approved by North Carolina, in order to be acceptable for certification purposes in North Carolina.

25. Q. Where can I get information on becoming a North Carolina accredited training provider to offer certified renovator or dust sampling technician accredited training courses?

A. Contact the HHCU at 919-707-5950.
IT’S THE LAW!

Federal law requires contractors that disturb painted surfaces in homes, child care facilities and schools, built before 1978 to be certified and follow specific work practices to prevent lead contamination. Always ask to see your contractor’s certification.

Federal law requires that individuals receive certain information before renovating more than six square feet of painted surfaces in a room for interior projects or more than twenty square feet of painted surfaces for exterior projects or window replacement or demolition in housing, child care facilities and schools built before 1978.

• Homeowners and tenants: renovators must give you this pamphlet before starting work.

• Child care facilities, including preschools and kindergarten classrooms, and the families of children under six years of age that attend those facilities: renovators must provide a copy of this pamphlet to child care facilities and general renovation information to families whose children attend those facilities.
WHO SHOULD READ THIS PAMPHLET?

This pamphlet is for you if you:

• Reside in a home built before 1978.
• Own or operate a child care facility, including preschools and kindergarten classrooms, built before 1978, or
• Have a child under six years of age who attends a child care facility built before 1978.

You will learn:

• Basic facts about lead and your health.
• How to choose a contractor, if you are a property owner.
• What tenants, and parents/guardians of a child in a child care facility or school should consider.
• How to prepare for the renovation or repair job.
• What to look for during the job and after the job is done.
• Where to get more information about lead.

This pamphlet is not for:

• Abatement projects. Abatement is a set of activities aimed specifically at eliminating lead or lead hazards. EPA has regulations for certification and training of abatement professionals. If your goal is to eliminate lead or lead hazards, contact the National Lead Information Center at 1-800-424-LEAD (5323) for more information.

• “Do-it-yourself” projects. If you plan to do renovation work yourself, this document is a good start, but you will need more information to complete the work safely. Call the National Lead Information Center at 1-800-424-LEAD (5323) and ask for more information on how to work safely in a home with lead-based paint.

• Contractor education. Contractors who want information about working safely with lead should contact the National Lead Information Center at 1-800-424-LEAD (5323) for information about courses and resources on lead-safe work practices.
RENOVATING, REPAIRING, OR PAINTING?

- Is your home, your building, or the child care facility or school your children attend being renovated, repaired, or painted?
- Was your home, your building, or the child care facility or school where your children under six years of age attend built before 1978?

If the answer to these questions is YES, there are a few important things you need to know about lead-based paint.

This pamphlet provides basic facts about lead and information about lead safety when work is being done in your home, your building or the child care facility or school your children attend.

The Facts About Lead

- Lead can affect children’s brains and developing nervous systems, causing reduced IQ, learning disabilities, and behavioral problems. Lead is also harmful to adults.
- Lead in dust is the most common way people are exposed to lead. People can also get lead in their bodies from lead in soil or paint chips. Lead dust is often invisible.
- Lead-based paint was used in more than 38 million homes until it was banned for residential use in 1978.
- Projects that disturb painted surfaces can create dust and endanger you and your family. Don’t let this happen to you. Follow the practices described in this pamphlet to protect you and your family.

LEAD AND YOUR HEALTH

Lead is especially dangerous to children under six years of age.

Lead can affect children’s brains and developing nervous systems, causing:
- Reduced IQ and learning disabilities.
- Behavior problems.

Even children who appear healthy can have dangerous levels of lead in their bodies.

Lead is also harmful to adults. In adults, low levels of lead can pose many dangers, including:
- High blood pressure and hypertension.
- Pregnant women exposed to lead can transfer lead to their fetuses. Lead gets into the body when it is swallowed or inhaled.
- People, especially children, can swallow lead dust as they eat, play, and do other normal hand-to-mouth activities.
- People may also breathe in lead dust or fumes if they disturb lead-based paint. People who sand, scrape, burn, brush or blast or otherwise disturb lead-based paint risk unsafe exposure to lead.

What should I do if I am concerned about my family’s exposure to lead?

- Call your local health department for advice on reducing and eliminating exposures to lead inside and outside your home, child care facility or school.
- Always use lead-safe work practices when renovation or repair will disturb painted surfaces.
- A blood test is the only way to find out if you or a family member already has lead poisoning. Call your doctor or local health department to arrange for a blood test.

For more information about the health effects of exposure to lead, visit the EPA lead website at [www.epa.gov/lead/pubs/leadinfo.htm](http://www.epa.gov/lead/pubs/leadinfo.htm) or call 1-800-424-LEAD (5323).

There are other things you can do to protect your family every day.

- Regularly clean floors, window sills, and other surfaces.
- Wash children’s hands, bottles, pacifiers, and toys often.
- Make sure children eat a healthy, nutritious diet consistent with the USDA’s dietary guidelines, that helps protect children from the effects of lead.
- Wipe off shoes before entering house.
WHERE DOES THE LEAD COME FROM?

Dust is the main problem.
The most common way to get lead in the body is from dust. Lead dust comes from deteriorating lead-based paint and lead-contaminated soil that gets tracked into your home. This dust may accumulate to unsafe levels. Then, normal hand-to-mouth activities, like playing and eating (especially in young children), move that dust from surfaces like floors and window sills into the body.

Home renovation creates dust.
Common renovation activities like sanding, cutting, and demolition can create hazardous lead dust and chips.

Proper work practices protect you from the dust.
The key to protecting yourself and your family during a renovation, repair or painting job is to use lead-safe work practices such as containing dust inside the work area, using dust-minimizing work methods, and conducting a careful cleanup, as described in this pamphlet.

Other sources of lead.
Remember, lead can also come from outside soil, your water, or household items (such as lead-glazed pottery and lead crystal). Contact the National Lead Information Center at 1-800-424-LEAD (5323) for more information on these sources.

CHECKING YOUR HOME FOR LEAD-BASED PAINT

Older homes, child care facilities, and schools are more likely to contain lead-based paint.
Homes may be single-family homes or apartments. They may be private, government-assisted, or public housing. Schools are preschools and kindergarten classrooms. They may be urban, suburban, or rural.

You have the following options:
You may decide to assume your home, child care facility, or school contains lead. Especially in older homes and buildings, you may simply want to assume lead-based paint is present and follow the lead-safe work practices described in this brochure during the renovation, repair, or painting job.

You can hire a certified professional to check for lead-based paint.
These professionals are certified risk assessors or inspectors, and can determine if your home has lead or lead hazards.

- A certified inspector or risk assessor can conduct an inspection telling you whether your home, or a portion of your home, has lead-based paint and where it is located. This will tell you the areas in your home where lead-safe work practices are needed.

- A certified risk assessor can conduct a risk assessment telling you if your home currently has any lead hazards from lead in paint, dust, or soil. The risk assessor can also tell you what actions to take to address any hazards.

- For help finding a certified risk assessor or inspector, call the National Lead Information Center at 1-800-424-LEAD (5323).

You may also have a certified renovator test the surfaces or components being disturbed for lead using a lead test kit. Test kits must be EPA-recognized and are available at hardware stores. They include detailed instructions for their use.
FOR PROPERTY OWNERS

You have the ultimate responsibility for the safety of your family, tenants, or children in your care.

This means properly preparing for the renovation and keeping persons out of the work area (see p. 8). It also means ensuring the contractor uses lead-safe work practices.

Federal law requires that contractors performing renovation, repair and painting projects that disturb painted surfaces in homes, child care facilities, and schools built before 1978 be certified and follow specific work practices to prevent lead contamination.

Make sure your contractor is certified, and can explain clearly the details of the job and how the contractor will minimize lead hazards during the work.

• You can verify that a contractor is certified by checking EPA's website at epa.gov/getleadsafe or by calling the National Lead Information Center at 1-800-424-LEAD (5323). You can also ask to see a copy of the contractor's firm certification.

• Ask if the contractor is trained to perform lead-safe work practices and to see a copy of their training certificate.

• Ask them what lead-safe methods they will use to set up and perform the job in your home, child care facility or school.

• Ask for references from at least three recent jobs involving homes built before 1978, and speak to each personally.

Always make sure the contract is clear about how the work will be set up, performed, and cleaned.

• Share the results of any previous lead tests with the contractor.

• You should specify in the contract that they follow the work practices described on pages 9 and 10 of this brochure.

• The contract should specify which parts of your home are part of the work area and specify which lead-safe work practices will be used in those areas. Remember, your contractor should confine dust and debris to the work area and should minimize spreading that dust to other areas of the home.

• The contract should also specify that the contractor will clean the work area, verify that it was cleaned adequately, and re-clean it if necessary.

If you think a worker is not doing what he is supposed to do or is doing something that is unsafe, you should:

• Direct the contractor to comply with regulatory and contract requirements.

• Call your local health or building department, or

• Call EPA's hotline 1-800-424-LEAD (5323).

If your property receives housing assistance from HUD (or a state or local agency that uses HUD funds), you must follow the requirements of HUD’s Lead-Safe Housing Rule and the ones described in this pamphlet.

FOR TENANTS AND FAMILIES OF CHILDREN UNDER SIX YEARS OF AGE IN CHILD CARE FACILITIES AND SCHOOLS

You play an important role ensuring the ultimate safety of your family.

This means properly preparing for the renovation and staying out of the work area (see p. 8).

Federal law requires that contractors performing renovation, repair and painting projects that disturb painted surfaces in homes built before 1978 and in child care facilities and schools built before 1978, that a child under six years of age visits regularly, to be certified and follow specific work practices to prevent lead contamination.

The law requires anyone hired to renovate, repair, or do painting preparation work on a property built before 1978 to follow the steps described on pages 9 and 10 unless the area where the work will be done contains no lead-based paint.

If you think a worker is not doing what he is supposed to do or is doing something that is unsafe, you should:

• Contact your landlord.

• Call your local health or building department, or

• Call EPA's hotline 1-800-424-LEAD (5323).

If you are concerned about lead hazards left behind after the job is over, you can check the work yourself (see page 10).
PREPARING FOR A RENOVATION

The work areas should not be accessible to occupants while the work occurs.

The rooms or areas where work is being done may need to be blocked off or sealed with plastic sheeting to contain any dust that is generated. Therefore, the contained area may not be available to you until the work in that room or area is complete, cleaned thoroughly, and the containment has been removed. Because you may not have access to some areas during the renovation, you should plan accordingly.

You may need:

• Alternative bedroom, bathroom, and kitchen arrangements if work is occurring in those areas of your home.

• A safe place for pets because they too can be poisoned by lead and can track lead dust into other areas of the home.

• A separate pathway for the contractor from the work area to the outside in order to bring materials in and out of the home. Ideally, it should not be through the same entrance that your family uses.

• A place to store your furniture. All furniture and belongings may have to be moved from the work area while the work is being done. Items that can’t be moved, such as cabinets, should be wrapped in plastic.

• To turn off forced-air heating and air conditioning systems while the work is being done. This prevents dust from spreading through vents from the work area to the rest of your home. Consider how this may affect your living arrangements.

You may even want to move out of your home temporarily while all or part of the work is being done.

Child care facilities and schools may want to consider alternative accommodations for children and access to necessary facilities.

DURING THE WORK

Federal law requires contractors that are hired to perform renovation, repair and painting projects in homes, child care facilities, and schools built before 1978 that disturb painted surfaces to be certified and follow specific work practices to prevent lead contamination.

The work practices the contractor must follow include these three simple procedures, described below:

1. Contain the work area. The area must be contained so that dust and debris do not escape from that area. Warning signs must be put up and plastic or other impermeable material and tape must be used as appropriate to:

   • Cover the floors and any furniture that cannot be moved.
   • Seal off doors and heating and cooling system vents.

These will help prevent dust or debris from getting outside the work area.

2. Avoid renovation methods that generate large amounts of lead-contaminated dust.

Some methods generate so much lead-contaminated dust that their use is prohibited. They are:

   • Open flame burning or torching.
   • Sanding, grinding, planing, needle gunning, or blasting with power tools and equipment not equipped with a shroud and HEPA vacuum attachment.
   • Using a heat gun at temperatures greater than 1100°F.

There is no way to eliminate dust, but some renovation methods make less dust than others. Contractors may choose to use various methods to minimize dust generation, including using water to mist areas before sanding or scraping; scoring paint before separating components; and prying and pulling apart components instead of breaking them.

3. Clean up thoroughly. The work area should be cleaned up daily to keep it as clean as possible. When all the work is done, the area must be cleaned up using special cleaning methods before taking down any plastic that isolates the work area from the rest of the home. The special cleaning methods should include:

   • Using a HEPA vacuum to clean up dust and debris on all surfaces, followed by
   • Wet wiping and wet mopping with plenty of rinse water.

When the final cleaning is done, look around. There should be no dust, paint chips, or debris in the work area. If you see any dust, paint chips, or debris, the area must be re-cleaned.
FOR PROPERTY OWNERS: AFTER THE WORK IS DONE

When all the work is finished, you will want to know if your home, child care facility, or school where children under six attend has been cleaned up properly.

**EPA Requires Cleaning Verification.**

In addition to using allowable work practices and working in a lead-safe manner, EPA's RRP rule requires contractors to follow a specific cleaning protocol. The protocol requires the contractor to use disposable cleaning cloths to wipe the floor and other surfaces of the work area and compare these cloths to an EPA-provided cleaning verification card to determine if the work area was adequately cleaned. EPA research has shown that following the use of lead-safe work practices with the cleaning verification protocol will effectively reduce lead dust hazards.

**Lead-Dust Testing.**

EPA believes that if you use a certified and trained renovation contractor who follows the LRRP rule by using lead-safe work practices and the cleaning protocol after the job is finished, lead-dust hazards will be effectively reduced. If, however, you are interested in having lead-dust testing done at the completion of your job, outlined below is some helpful information.

**What is a lead-dust test?**

- Lead-dust tests are wipe samples sent to a laboratory for analysis. You will get a report specifying the levels of lead found after your specific job.

**How and when should I ask my contractor about lead-dust testing?**

- Contractors are not required by EPA to conduct lead-dust testing. However, if you want testing, EPA recommends testing be conducted by a lead professional. To locate a lead professional who will perform an evaluation near you, visit EPA’s website at www.epa.gov/lead/pubs/locate.htm or contact the National Lead Information Center at 1-800-424-LEAD (5323).

- If you decide that you want lead-dust testing, it is a good idea to specify in your contract, before the start of the job, that a lead-dust test is to be done for your job and who will do the testing, as well as whether re-cleaning will be required based on the results of the test.

- You may do the testing yourself. If you choose to do the testing, some EPA-recognized lead laboratories will send you a kit that allows you to collect samples and send them back to the laboratory for analysis. Contact the National Lead Information Center for lists of EPA-recognized testing laboratories.

FOR ADDITIONAL INFORMATION

You may need additional information on how to protect yourself and your children while a job is going on in your home, your building, or child care facility.

The National Lead Information Center at 1-800-424-LEAD (5323) or www.epa.gov/lead/nlic.htm can tell you how to contact your state, local, and/or tribal programs or get general information about lead poisoning prevention.

- State and tribal lead poisoning prevention or environmental protection programs can provide information about lead regulations and potential sources of financial aid for reducing lead hazards. If your state or local government has requirements more stringent than those described in this pamphlet, you must follow those requirements.

- Local building code officials can tell you the regulations that apply to the renovation work that you are planning.

- State, county, and local health departments can provide information about local programs, including assistance for lead-poisoned children and advice on ways to get your home checked for lead.

The National Lead Information Center can also provide a variety of resource materials, including the following guides to lead-safe work practices. Many of these materials are also available at www.epa.gov/lead/pubs/brochure.htm.

- Steps to Lead Safe Renovation, Repair and Painting.
- Protect Your Family from Lead in Your Home

For the hearing impaired, call the Federal Information Relay Service at 1-800-877-8339 to access any of the phone numbers in this brochure.
EPA CONTACTS

EPA Regional Offices
EPA addresses residential lead hazards through several different regulations. EPA requires training and certification for conducting abatement and renovations, education about hazards associated with renovations, disclosure about known lead paint and lead hazards in housing, and sets lead-paint hazard standards.

Your Regional EPA Office can provide further information regarding lead safety and lead protection programs at epa.gov/lead.

HUD Office of Healthy Homes and Lead Hazard Control
The Department of Housing and Urban Development (HUD) provides funds to state and local governments to develop cost-effective ways to reduce lead-based paint hazards in America’s privately-owned low-income housing. In addition, the office enforces the rule on disclosure of known lead paint and lead hazards in housing, and HUD’s lead safety regulations in HUD-assisted housing, provides public outreach and technical assistance, and conducts technical studies to help protect children and their families from health and safety hazards in the home. Contact the HUD Office of Healthy Homes and Lead Hazard Control for information on lead regulations, outreach efforts, and lead hazard control research and outreach grant programs.

SAMPLE PRE-RENOVATION FORM

This sample form may be used by renovation firms to document compliance with the Federal pre-renovation education and renovation, repair, and painting regulations.

Occupant Confirmation
Pamphlet Receipt

☐ I have received a copy of the lead hazard information pamphlet informing me of the potential risk of the lead hazard exposure from renovation activity to be performed in my dwelling unit. I received this pamphlet before the work began.

Printed Name of Owner-occupant

Signature of Owner-occupant   Signature Date

Renovator’s Self Certification Option (for tenant-occupied dwellings only)
Instructions to Renovator: If the lead hazard information pamphlet was delivered but a tenant signature was not obtainable, you may check the appropriate box below.

☐ Declined – I certify that I have made a good faith effort to deliver the lead hazard information pamphlet to the rental dwelling unit listed below at the date and time indicated and that the occupant declined to sign the confirmation of receipt. I further certify that I have left a copy of the pamphlet at the unit with the occupant.

☐ Unavailable for signature – I certify that I have made a good faith effort to deliver the lead hazard information pamphlet to the rental dwelling unit listed below and that the occupant was unavailable to sign the confirmation of receipt. I further certify that I have left a copy of the pamphlet at the unit by sliding it under the door or by (fill in how pamphlet was left).

Printed Name of Person Certifying Delivery   Attempted Delivery Date

Signature of Person Certifying Lead Pamphlet Delivery

Unit Address

Note Regarding Mailing Option — As an alternative to delivery in person, you may mail the lead hazard information pamphlet to the owner and/or tenant. Pamphlet must be mailed at least seven days before renovation. Mailing must be documented by a certificate of mailing from the post office.
